Amendments to the Claims

1. - 16. (Canceled)

17. (Currently Amended) An apparatus for making the reinforcement ply material of claim 1; comprising an elastomeric sheet and a plurality of reinforcement elements embedded therein; wherein the reinforcement elements are grouped in untwisted sets and each set contains a plurality of reinforcement elements; wherein adjacent reinforcement elements in the same set are spaced apart an intra-set distance and adjacent reinforcement elements in different sets are spaced apart an inter-set distance; and wherein the inter-set distance is greater than the intra-set distance;

said apparatus comprising:

an extruder and a die head into which the extruder extrudes an elastomeric material;

wherein the die head defines a die throat and includes a guide insert which guides the reinforcement elements into the die throat; and

wherein the guide insert comprises passages through which the reinforcement elements pass and which are arranged in a pattern corresponding to the arrangement of the reinforcement elements in the reinforced ply material.

- 18. (Original) An apparatus as set forth in claim 17, wherein the guide insert includes a passage for each set of reinforcement elements and wherein the passages are laterally spaced from each other a distance corresponding to the inter-set distance.
- 19. (Original) An apparatus as set forth in claim 18, wherein the lateral distance between passages is between about 0.20 mm and about 0.50 mm.
- 20. (Original) An apparatus as set forth in claim 19, wherein the lateral distance between passages is between about 0.30 mm and 0.45 mm.
- 21. (Original) An apparatus as set forth in claim 20, wherein the passages are circular in cross-section shape.
- 22. (Original) An apparatus as set forth in claim 20, wherein the passages are rectangular in cross-section shape.

- 23. (Original) An apparatus as set forth in claim 17, wherein the guide insert includes a passage for reinforcement elements and the passages are grouped in sets corresponding to the sets of reinforcement elements, wherein intra-set passages are spaced apart a lateral distance corresponding to the intra-set distance, and wherein inter-set passages are spaced apart a greater lateral distance corresponding to the inter-set distance.
- 24. (Original) An apparatus as set forth in claim 23, wherein the distance between intra-set passages is between about 0.11 mm and about 0.13 mm, and wherein the distance between inter-set passages is between about 0.13 and about 0.23 mm.
 - 25. 34. (Canceled)
